Virtual Alarm Monitoring - AI Driven Event Detection

The next generation of alarm detection, AI driven event alerts significantly reduce false alarms, unnecessary calls to the police, and overall increased security.
Having True AI reporting the alarm events ensures that our operators are not responding to events that don't actually require our attention. For you, that means a lower cost and a more safe and secure site.
Conventional Alarms only detect intruders AFTER they've already entered your property.

Virtual Guard Services

Virtual Guard Tours

A highly skilled security agent will log into your cameras in sequence and look at your cameras for suspicious activity. This can be done at Scheduled intervals or on demand.

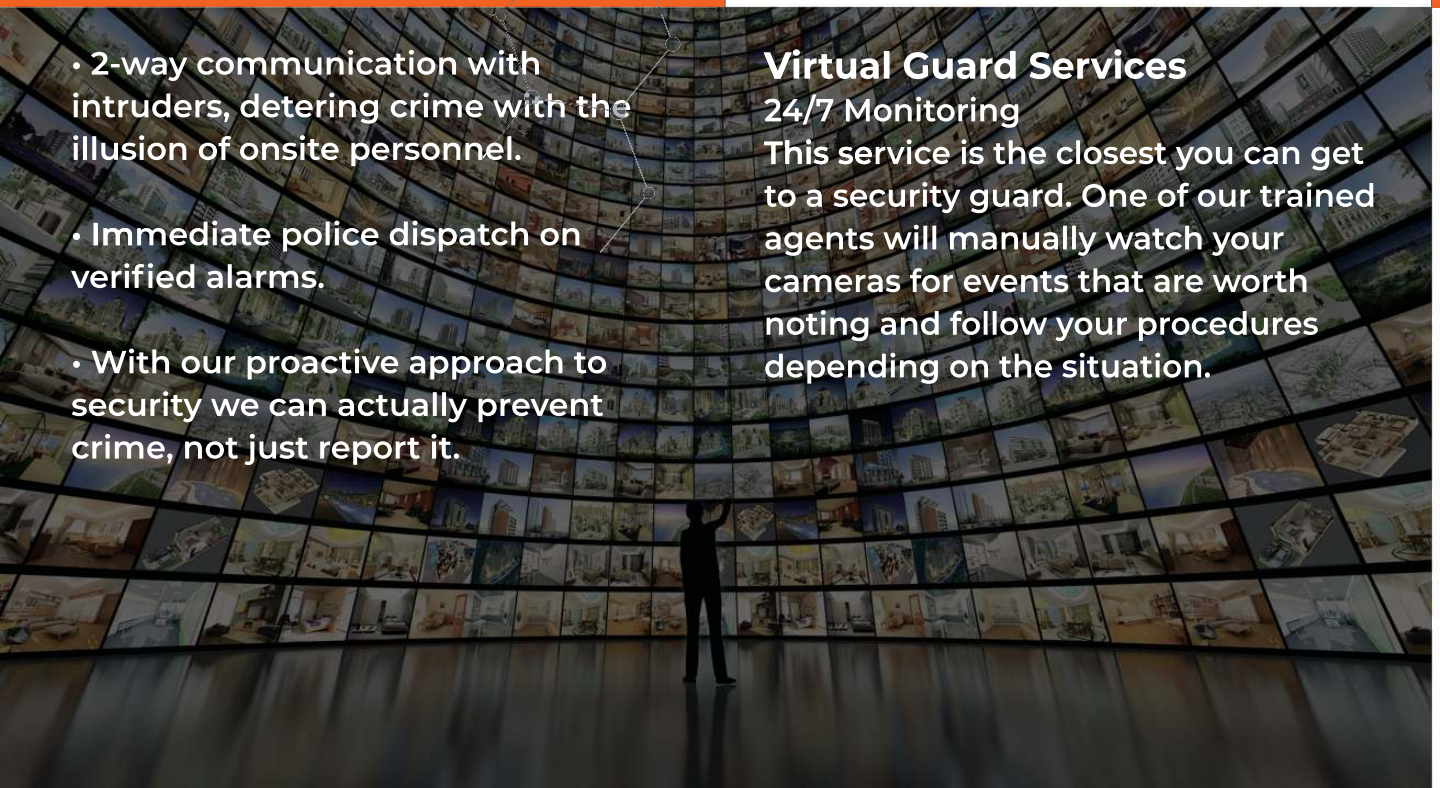
Virtual Escorts

Call into our monitoring center for a Virtual Escort. This service is essential for Employees who close stores by themselves or property managers who are showing an apartment and want some peace of mind.

Virtual Audit

How are your customers being treated?

As a manager, you know your employees will follow procedures when you are near them, but how do they act when you are away? With our Virtual Shopper Service, we will review a customers interaction and provide a report for you to review with your team.



- 2-way communication with intruders, detering crime with the illusion of onsite personnel.
- Immediate police dispatch on verified alarms.
- With our proactive approach to security we can actually prevent crime, not just report it.

Virtual Guard Services

24/7 Monitoring
This service is the closest you can get to a security guard. One of our trained agents will manually watch your cameras for events that are worth noting and follow your procedures depending on the situation.

Are policies being followed?

Another report we can generate is one where we verify most procedures are being followed. Are employees wearing gloves when working with food? Are surfaces being cleaned properly after guests? Are contractors wearing correct PPE?
